Mapping a Network Drive in Windows 7

Introduction

This procedure outlines the steps necessary to map a network drive. If you don’t know the Drive path, contact the campus IT for this information.

1. Go to Computer on the start menu, then select Map network drive.

2. Select the drive letter, enter folder info per example, and check reconnect a logon, then Finish.
3. The mapped network drive now shows up in the start menu Computer.

Network mappings that are automatically mapped on login are via logon scripts:

Faculty:
N:\ = Faculty Shared Drive for Students
P:\ = Shared Programs Drive
U:\ = Personal Network Drive

Administrative Staff:
S:\ = Campus Shared Drive
U:\ = Personal Network Drive
